

Winbond Product Longevity Program

10 Year Commitment to Long Term Support of Memory Products

Winbond Electronics Corporation, a longtime provider of memory semiconductors, is now offering a Winbond Product Longevity Program (WPLP) for applications that require long-term support. For the Automotive, Industrial, Consumer Medical, and Industrial/Ruggedized Computing segments, the WPLP makes a well-rounded variety of memory devices available for a minimum period of 10 years.

As with most memory-semiconductor longevity programs, extended support may require migration to lower geometry process nodes or transition to alternate manufacturing facilities. In such cases, Winbond shall offer form, fit, and function compatible devices. Winbond will internally qualify the WPLP devices, notify customers and work in supporting an uninterrupted business flow.

WPLP life cycles begin at the time of their product launch, and include the standard WPLP End of Life (EOL) notification. Winbond products classified as Automotive Grade will offer EOL notice with nine months for placement of final orders and an additional nine months until the last ship date (longer periods may be available). Winbond intends to manage the WPLP through Winbond's own state of the art 300mm manufacturing facility, outside foundries and other sub-contracted resources with which Winbond has maintained long-term relationships.

For specific inquiries on WPLP memory devices, please contact Winbond for our latest information on which products are supported by this program.
